BEST PRACTICE GUIDELINES

- Pre-cool the tile drill with a brief dip in a coolant. Run the power tool at full speed before beginning the cut.
 - Offer up the tile Drill to the material At an angle of 45 Degrees.
 - After creating a 'smile' cut in the material, raise the power tool to 90 Degrees and apply gentle pressure.
 - Gently oscillate the tile drill in the hole as being drilled. Use regular 5 second bursts during drilling.
 - Ensure the tile drill is pre-dipped into coolant before every hole is cut as per point 1. Tiles of 10mm plus will require multiple dips.
- Vapodry tile slugs will auto-eject.
